DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7, drawn to a system of providing movement along an axis, classified in class 310, subclass 328.
- II. Claims 8-10, drawn to an exhaust gas recirculation valve, classified in class 123, subclass 568.18.
- III. Claims 11-16, drawn to a vibration beam, classified in class 310, subclass 330.

The inventions are distinct, each from the other because of the following reasons:

Inventions of the three groups are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination (Group II) as claimed does not require the particulars of the subcombination as claimed because the beam in the exhaust gas recirculation valve may have a magnetostrictive component. Thus Group II may have either the Group I invention or the Group III invention as the subcombination. Groups I and III may also have separate utility such as a stage moving device.

Art Unit: 2834

The Group I invention may also be considered as a combination, in such case the Group III invention is the subcombination. Again in this instance, the combination (Group I) does not require the particulars of the subcombination as claimed because the beam may have a magnetostrictive component. Group I may also have separate utility such as a stage moving device.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
